

Day 29

“Web Development + Security”

Figma:

What is Figma?

Figma is a browser-based design tool used for:

- UI/UX design
- Wireframing
- Prototyping
- Collaboration (multiple people can design on the same file in real-time)

It’s like a mix of Photoshop + Illustrator, but simpler and focused on interface design.

How Figma Fits Into Web Development

Stage	What You Do in Figma	What You Do in Code
Design	Draw buttons, layouts, navigation bars, cards, sections	HTML for structure, CSS for styling
Prototype	Link pages, simulate button clicks	Add real interactivity with JavaScript
Inspect	Copy CSS values, fonts, colors	Paste or replicate in your code

Shortcuts:

Action	Shortcut
Frame	F
Rectangle	R
Text	T
Zoom In/Out	Ctrl/Cmd + Scroll
Duplicate	Ctrl/Cmd + D
Group	Ctrl/Cmd + G
Show Rulers	Shift + R
Preview Prototype	Present (Play Icon)
